More about Varicose Veins you can read in the treatment subsection **OTHER**.

The essence of the laser method is intracellular closure of inefficient vein without necessity of it's removal, like in surgical method. Thanks to that, treatment is non-invasive and we can perform it under local anaesthesia. Unquestionable advantage of this method is that patient directly after procedure can go home and lives it's regular live. About 24 hours after treatment can go back to work. There are no age limit to obtain laser varicose vein treatment.

Varicose Vein treatment step by step

1. Moving of special catheter and optic fibre into the vein.
2. Anaesthetic of the vein.
3. Laser activation
4. Catheter and optic fibre extraction.
5. Putting on a pressure dressing.

We are medical centre specializing in laser removing of varicose veins with EVLT method which is described
