1. Anti wrinkles, scars, acne, sunspots treatment.

X

Our clinic owns latest Fraxal Laser Er.YAG for skin rejuvenation.

Fraxal laser light operate on, only small parts of skin- microspots. It accelerates healing process and increase patients comfort. Treatment stimulates collagen formation, cause immediate skin tension. Your skin, for a very long time will look healthy and young. Fraxal laser method enable reducing pooperative and acne scars. Laser resurfacing also fixes wrinkles and skin hyperpigmentation.

2. Small blood vessels closure.

Braking of small blood vessels cause unsightly marks on our faces. Light energy coming from laser is absorbed by haemoglobin (red blood pigment), what causes closure of blood vessels and disappearing of unattractive spots from face. Depend from amount, diameter and colour of skin hyperpigmentation, you will need from 1 to 3 laser treatments to make your skin looks beautiful again.

3. Laser depilation.

Laser depilation is one and only effective method of permanent getting rid of unwanted hairs from your body. In our centre we have latest diode laser made by German company Asclepion, which you can use for every type of skin and hairs.

Laser Therapy Center

Laser Therapy Center is the first in Poland center of laser aesthetic medicine. We have 20 years of experience.
