In fact, health and safety are getting the increasing attention recently. However, they demand professional knowledge and competent assistance. Therefore, taking care of your health is always in the center of our attention. Based on scientific evidence and an understanding of clinical best practices, we have designed programs to help detect and often prevent or control the worsening of an illness.

In order to help you to protect yourself from the negative impact of civilization and focus your awareness on your safety we would like to introduce The Preventive Health Program.

It is a process of making small regular decisions and taking positive action on health, diet, exercise and lifestyle. We address this plan to active, dynamic and energetic people who tend to be always on the go and miss regular periodic medical tests.

Our purpose is to provide you with high quality information on protecting your health particularly in relation to the prevention of chronic degenerative disease.

MAIN UNIT – OBLIGATORY

The range of a consultation consists of: anamnesis, basic medical examination: RR, pulse, balance, height, BMI, treatment.
